

Research question

Does the rise of AI impact job opportunities for new workers trying to get into the workforce in Australia?

Statement:

The research investigates how the rise of AI is impacting employment opportunities and job security in Australia such as layoffs, job displacement, and automation of certain jobs and how this will pose as a threat to new workers who are trying to get into the workforce in Australia as it poses as a barrier for entry. This data will be collected from government websites and organisations. The data used will be second hand data both qualitative and quantitative data. The qualitative and quantitative data used will be collected from surveys, statistics, questionnaires, and other suitable methods and techniques for collecting data. The progress of this project will be documented and monitored through a gantt chart

Project timeline:

Start date: 5/11/26

End date: 8/14/26

Functional and non functional requirements

Functional:

- Solution must present all finding and address both positive impacts such as new AI related jobs and negative impacts such as automation.
- Solution must be accessible for young

Non functional:

- Solution must be easy to navigate for new workers and graduates
- Solution must not be messy so it is easy to understand

Data integrity

- Data is from popular and reputable sources such as organisations
- Data is anonymous, upholding to the APP2
- Data is from the last two years, making it reliable

Constraints

- Limited time: Due to working in a time limited condition, there may be limitations in my collection of primary data
- Sample size: Sample size may be limited due to time constraints as the ideal sample size is around 20-30 however due to the time constraints, the sample size achieved may be 10-20
- Costs: I may need to spend money on printing qr codes for the purpose of collecting primary data
- Data privacy requirements: I must uphold the APP when collecting primary data.

Scope

- The scope is specifically focused on young newly graduated australians who are trying to get into the workforce. It focuses specifically on AI and its effects on entry level and graduate level job opportunities. The scope doesn't extend to mid career or senior workers.

Follow up questions

- Is the rise of AI the main cause of the fall of entry level job opportunities in Australia?
- Does AI create more entry level job opportunities than it destroys in Australia?
- What industries are the most vulnerable to AI automation in Australia and how will this affect

Data collected:

- AI. (2026). AI and its impact on university students. Google Docs. <https://docs.google.com/forms/d/1XhIbczymWitev2fg7GBF8SMudc-3cNBIWCOShHRpsDo/edit>
- Indeed.com. (2024). Indeed.com. <https://data.indeed.com/#/postings> (Shows change in level of job postings on Indeed. Since 2023 which is around the time when AI grew in popularity, job postings on indeed have been on a decreasing trend. Possible correlation between rise in AI terms in job postings on indeed and decrease in job postings on indeed)
- Indeed.com. (2025). Indeed.com. <https://data.indeed.com/#/ai> (Shows share (%) of job postings on Indeed containing Artificial Intelligence (AI) terms. From the graph, there seems to be an upwards trend in Australia, indicating a rise in the implementation of AI in the workforce)
- Pickering, C. (2026, April 21). Nice Try, AI: Australian Graduates Are Still Getting Hired - Indeed Hiring Lab Australia. Indeed Hiring Lab Australia.

- Google Trends. (2026). Google Trends. Google Trends. <https://trends.google.com/trends/explore?date=all&geo=AU&q=%2Fm%2F0mkz&hl=en-US> (Shows the interest in search popularity of Artificial Intelligence where 1 is the lowest and 100 is the highest)
- <https://www.hiringlab.org/au/blog/2026/04/22/nice-try-ai-australian-graduates-are-still-getting-hired/> (Shows how graduate level jobs are starting to rebound. Includes data such as graduate job opportunities falling almost 15% last year as well as goes over concepts such as despite graduate opportunities in jobs highly exposed to AI have declined more than average, the timing suggests that AI adoption is not the primary driver and Job seeker searches for graduate jobs remain low, suggesting that graduates still find it relatively easy to find work)
- PricewaterhouseCoopers. (2024, June 6). AI Jobs Barometer | PwC. PwC. <https://www.pwc.com.au/services/artificial-intelligence/ai-jobs-barometer.html> (Shows total number and share of job postings requiring AI related skills in Australia. This indicates that AI may not be taking jobs away from graduates but rather being an additional skill needed for graduates to enter the workforce.)

Plan to manage data and files for the project:

I would have a backup strategy in place. Specifically I will have multiple backups off site separate from each other to ensure their safety incase anything were to happen such as a fire. I would archive older versions of the files and datasets in a designated archive folder. When data is not needed anymore, It will be disposed securely and permanently to ensure the safety of peoples data.

Brain storm:

I will have an infographic that is designed to be readable for users as well as make it look nice. I would use a color scheme that is very readable. Possibly a black and white design to ensure readability however i may use a blue and beige colour scheme in order to have a balance between readability and design. My spreadsheets will be green and grey for design purposes. I would use SQL to use a join operation to link two or more of the datasets I've collected together

Evaluation criteria:

1. Functional and non functional requirements:

Functional:

- Solution must present all findings
- Solution must display data in at least two visual forms

Non functional:

- Solution must be easy to navigate for new workers and graduates
- Solution must not be messy so it is easy to understand

2. Data integrity:

- Data is from popular and reputable sources such as organisations
- Data is anonymous, upholding to the APP2
- Data is from the last two years, making it reliable
-

3. ReadabilitySolution must be easy to read and understand

- Solution layout must be easy to understand

4. Design

- Solution must have a visually appealing design
- Solutions colour scheme must not take away from the readability of the solution.

Design principles considered:

- White space
- Contrast
- Alignment
- Readability
- Consistency

IPO chart:

Input	Process	Output
Raw survey data	Filtered by how much they agree that AI will destroy more jobs than it will create	A bar chart displaying this data
Raw job posting data	Filtered by the number of job postings	A line chart displaying the data
Raw Interest in AI data	Filtered by search interest in Australia	A line chart displaying the data

Possible contingencies:

- May not be enough space to fit everything inside
 - Solution: Create more spaces while keeping the alignment consistent
- May not be able to compare multiple datasets on canva due to technical issues
- Solution: Compare the datasets on spreadsheet and take a screenshot to paste on the Canva infographic.
